## The Aging Physician Workforce: A Demographic Dilemma

A resource provided by Merritt Hawkins, the nation's leading physician search and consulting firm and a company of AMN Healthcare (NYSE: AHS), the largest healthcare workforce solutions company in the United States.

## THE AGING PHYSICIAN WORKFORCE:

## A DEMOGRAPHIC DILEMMA

A resource provided by Merritt Hawkins, the nation's leading physician search and consulting firm and a company of AMN Healthcare

## Introduction

It can be said of each one of us, of the nation as a whole, and of its 750,000 -plus physicians: we are not getting any younger.

Advances in technology, nutrition, healthcare delivery services, and overall quality of life have extended the life expectancy of people around the world, particularly those in developed countries such as the United States. The chart below shows percent of population of various countries aged 65 or over. While the United States is not in the top ten, the U.S. does rank second in the world in percent of population 80 years old or older.

PERCENTAGE OF POPULATION 65+

## Source: The World Bank DataBank

Aging patient demographics are a key driver of healthcare demand and delivery. Older patients are more likely to have a regular healthcare provider, require treatment for chronic conditions, undergo surgical procedures or diagnostic testing, and access Medicare as a form of insurance coverage than are younger people, to a highly significant degree.

An important subgroup within the U.S. population - physicians - is aging along with the general population.

The combination of an aging patient population and an aging physician population is creating one of the underlying drivers of the growing physician shortage.

The doctor shortage recently was projected to reach as many as 90,400 physicians by 2025 as patients age and as more physicians, prompted in some cases by low morale and a rapidly changing medical practice environment, choose to retire (for more information on the physician shortage see "The Complexities of Physician Supply and Demand: Projections from 2013 to 2025". Association of American Medical Colleges. March, 2015).

With an aging general population in need of medical coverage, and an aging physician population nearing retirement, the healthcare system is facing a profound demographic dilemma: who will provide care to the elderly when physicians themselves age out of the workforce?

In this white paper, Merritt Hawkins, the nation's leading physician search firm, examines physician and population aging trends by state and by specialty, looks at healthcare utilization by age, and reveals some of the reasons a growing number of physicians are likely to retire.

## United States Population Demographics

The United States has a current population (2015) of $318,857,056$, making it the third most populous country in the world behind China and India. Of that population, $14.1 \%$, or $44,958,845$ people, are 65 years of age or older- the portion of the population that requires the most healthcare coverage. A breakdown of population age by state is below:

|  | Total Population | Population $\mathbf{6 5 +}$ | Percentage of Population |
| :--- | ---: | ---: | ---: |
|  | $\underline{(\mathbf{2 0 1 4 )}}$ | $\underline{\mathbf{6 5 0 1 4 )}}$ | $\mathbf{1 4 . 9 \%}$ |
| State | $4,849,377$ | 722,557 | $9.0 \%$ |
| Alaska | 736,732 | 66,306 | $15.4 \%$ |
| Arizona | $6,731,484$ | $1,036,649$ | $15.4 \%$ |
| Arkansas | $2,966,369$ | 456,821 | $12.5 \%$ |
| California | $38,802,500$ | $4,850,313$ | $12.3 \%$ |
| Colorado | $5,355,866$ | 658,772 | $15.2 \%$ |
| Connecticut | $3,596,677$ | 546,695 | $15.9 \%$ |
| Delaware | 935,614 | 148,763 | $11.4 \%$ |
| Washington, D.C. | 658,893 | 75,114 | $18.7 \%$ |
| Florida | $19,893,297$ | $3,720,047$ | $12.0 \%$ |
| Georgia | $10,097,343$ | $1,211,681$ | $15.6 \%$ |
| Hawaii | $1,419,561$ | 221,452 | $13.8 \%$ |
| Idaho | $1,634,464$ | 225,556 | $13.5 \%$ |
| Illinois | $12,880,580$ | $1,738,878$ | $13.9 \%$ |
| Indiana | $6,596,855$ | 916,963 | $15.6 \%$ |
| lowa | $3,107,126$ | 484,712 | $14.0 \%$ |
| Kansas | $2,904,021$ | 406,563 | $14.4 \%$ |

Source: U.S. Census Bureau

Not surprisingly, Florida ranks as the oldest state on average, with close to 19 percent of the population 65 or older and eligible for Medicare. This is a harbinger of the future. By 2030, the U.S. Census Bureau projects that the entire nation will be as old on average as Florida is now.

Over the next few decades, the Census Bureau projects that this aging population will increase at a steady rate- reaching nearly 100 million individuals aged 65 or older by the year 2060 (see chart below).

United States Population Projections for Individuals 65 and Older

| Current | $\underline{\mathbf{2 0 2 0}}$ | $\underline{\mathbf{2 0 3 0}}$ | $\underline{\mathbf{2 0 4 0}}$ | $\underline{\mathbf{2 0 5 0}}$ | $\underline{\mathbf{2 0 6 0}}$ |
| ---: | ---: | ---: | ---: | ---: | ---: |
| $44,958,845$ | $56,441,000$ | $74,107,000$ | $82,344,000$ | $87,996,000$ | $98,164,000$ |

Source: U.S. Census Bureau
These projections represent a significant portion of the U.S. population that will require a growing volume of healthcare services over coming decades, an important factor when considering supply and demand of
physician providers and advanced practitioners.
A large portion of individuals aged 65 or older utilize Medicare for health insurance coverage. Individuals qualify for Medicare if:

* They are 65 years old or older and are a U.S. citizen/permanent legal resident; and
* The individual or their spouse has worked long enough to collect Social Security or railroad retirement benefits; or
* The individual or their spouse has paid Medicare payroll taxes while working.

## Source: American Association of Retired Persons (AARP)

Based on these qualifications, nearly 50 million individuals accessed Medicare insurance coverage in 2012, according to the Kaiser Family Foundation. A state-by-state breakdown is below:

| Location | Total <br> Medicare Beneficiaries | $\frac{\text { Percentage of Total }}{\text { Population }}$ |
| :---: | :---: | :---: |
| Alabama | 881,686 | 18\% |
| Alaska | 69,301 | 10\% |
| Arizona | 977,447 | 15\% |
| Arkansas | 552,375 | 19\% |
| California | 5,000,198 | 13\% |

|  |  |  |

Source: Kaiser Family Foundation

These nearly 50 million Medicare recipients represent $16 \%$ of the total population. The access Medicare recipients have to physician services may be limited not only by their growing numbers but also by economic considerations. According to the Department of Health and Human Services, Medicare reimbursement rates are $80 \%$ that of private insurance companies, and in many areas they are lower. A growing number of physicians have found it economically unsustainable to see Medicare patients. According to the 2014 Survey of America's Physicians, conducted by Merritt Hawkins on behalf of The Physicians Foundation, about $13 \%$ of physicians have stopped seeing Medicare patients, while $11 \%$ limit the number they see.

## Age as a Utilization Driver

As referenced above, those 65 and older are considerably more likely to have a regular healthcare provider than are younger people. According to the Centers for Disease Control and Prevention (CDC), only 3.3\% of individuals age 65 or over do not have a regular healthcare provider, compared to $23.7 \%$ of individuals aged 18-44 and 11.9\% of individuals aged 45-64.

# Individuals Without Regular Healthcare Provider 

Source: Centers for Disease Control and Prevention (CDC) Summary Health Statistics for U.S. Adults: National Health Interview Survey, 2012

According, those 65 and older generate a considerably higher number of physician visits per year than do those in younger age cohorts. The chart below indicates that young adults are much more likely not to see a physician in the course of a year than are older people, and that older people are much more likely to see a physician multiple times during the year than are younger people.

Number of Physician Visits in Last 12 Months
Number of Visits

| Age | $\underline{\text { None }}$ | $\underline{1}$ | $\underline{2}$ or 3 | $\underline{4 \text { to } 9}$ | $\underline{10+}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $18-44$ | $27.2 \%$ | $21.0 \%$ | $24.3 \%$ | $16.9 \%$ | $10.6 \%$ |
| $45-64$ | $16.0 \%$ | $17.5 \%$ | $27.5 \%$ | $25.0 \%$ | $13.9 \%$ |
| $65-74$ | $7.5 \%$ | $12.6 \%$ | $27.6 \%$ | $34.0 \%$ | $18.3 \%$ |
| $75+$ | $5.8 \%$ | $8.5 \%$ | $24.3 \%$ | $38.7 \%$ | $22.6 \%$ |

Number of Physician Visits in Last 12
Months

Source: Centers for Disease Control and Prevention (CDC) Summary Health Statistics for U.S. Adults: National Health Interview Survey, 2012

In addition to generating proportionately more physician visits, older patients are also more likely to undergo inpatient procedures than are younger patients. CDC data for 2010 analyzing some 51,430,000 inpatient procedures indicate that $67.4 \%$ were undergone by patients 45 years of age or older.

| Age | Number of Inpatient <br> Procedures | Percentage |
| :--- | ---: | ---: |
| Under 15 | $1,771,000$ | $3.4 \%$ |
| 15 to 44 | $15,036,000$ | $29.2 \%$ |
| $45-64$ | $15,404,000$ | $30.0 \%$ |
| $65+$ | $19,219,000$ | $37.4 \%$ |
| Total | $51,430,000$ |  |

## IN-PATIENT PROCEDURES BY AGE GROUP

Though they represent only $14 \%$ of the population, people 65 and older generate over $37 \%$ of all inpatient procedures.

Older individuals are also more likely to undergo diagnostic testing or treatments than are younger individuals. In 2010, the CDC reports that of the 16,893,000 diagnostic treatments, $47.1 \%$ were undergone by individuals 65 or older:

|  | Number of Diagnostic <br> Age |  |
| :--- | ---: | ---: |
| Under 15 | 741,000 | $4.4 \%$ |
| Treatments | Percentage |  |
| $\mathbf{1 5}$ to 44 | $2,607,000$ | $15.4 \%$ |
| $45-64$ | $5,591,000$ | $33.1 \%$ |
| $65+$ | $7,954,000$ | $47.1 \%$ |
| Total | $16,893,000$ |  |

# USE OF DIAGNOSTIC TESTS/TREATMENTS BY AGE GROUP 

Source: Center for Disease Control and Prevention
As these figures indicate, the Medicare-eligible population continues to drive the greatest demand for healthcare services, through frequency of physician visits and utilization of diagnostic testing/treatments and in-patient procedures. As the portion of this population continues to grow in size over the coming decades, it will be essential to generate physician supply and other healthcare resources commensurately.

## The Graying of the Physician Workforce

While the general population is rapidly aging it also is true that "Young Doctor Kildaire" is no longer so young. According to the Association of American Medical Colleges (AAMC) 2013 State Physician Workforce Data Book, $27.6 \%$ of the physician population is 60 years of age or older- a total of 225,221 physicians. Below is a breakdown of physicians 60 or older by state:

| State | Number of <br> Physicians $\mathbf{6 0 +}$ | Percentage of Physician |
| :--- | ---: | ---: |
| Alabama | 2,612 | Population |
| Alaska | 477 | $27.0 \%$ |
| Arizona | 3,988 | $26.4 \%$ |
| Arkansas | 1,609 | $26.5 \%$ |
| California | 30,835 | $28.6 \%$ |
| Colorado | 3,548 | $31.5 \%$ |
| Connecticut | 3,442 | $25.6 \%$ |
| Delaware | 590 | $28.8 \%$ |
| Washington, D.C. | 1,653 | $24.2 \%$ |
| Florida | 14,318 | $29.7 \%$ |
| Georgia | 5,266 | $29.4 \%$ |
| Hawaii | 1,229 | $24.7 \%$ |
| Idaho | 721 | $30.5 \%$ |
| Illinois | 8,865 | $24.6 \%$ |
| Indiana | 3,625 | $26.2 \%$ |
|  |  | $25.4 \%$ |

| lowa | 1,608 | $25.1 \%$ |
| :--- | ---: | ---: |
| Kansas | 1,716 | $27.9 \%$ |
| Kentucky | 2,499 | $25.9 \%$ |
| Louisiana | 3,161 | $29.2 \%$ |
| Maine | 1,243 | $30.5 \%$ |
| Maryland | 6,307 | $29.4 \%$ |
| Massachusetts | 7,516 | $26.8 \%$ |
| Michigan | 7,352 | $28.0 \%$ |
| Minnesota | 3,516 | $23.7 \%$ |
| Mississippi | 1,511 | $28.0 \%$ |
| Missouri | 3,996 | $26.2 \%$ |
| Montana | 716 | $31.2 \%$ |
| Nebraska | 991 | $24.3 \%$ |
| Nevada | 1,332 | $25.0 \%$ |
| New Hampshire | 997 | $25.3 \%$ |
| New Jersey | 7,682 | $30.1 \%$ |
| New Mexico | 1,610 | $33.3 \%$ |
| New York | 20,474 | $30.0 \%$ |
| North Carolina | 5,214 | $22.6 \%$ |
| North Dakota | 427 | $25.9 \%$ |
| Ohio | 7,742 | $24.9 \%$ |
| Oklahoma | 2,237 | $29.7 \%$ |
| Oregon | 2,932 | $26.7 \%$ |
| Pennsylvania | 10,478 | $27.3 \%$ |
| Rhode Island | 923 | $26.0 \%$ |
| South Carolina | 2,586 | $25.2 \%$ |
| South Dakota | 473 | $25.7 \%$ |
| Tennessee | 4,119 | $26.5 \%$ |
| Texas | 13,599 | $25.1 \%$ |
| Utah | 1,403 | $24.2 \%$ |
| Vermont | 589 | $28.3 \%$ |
| Virginia | 5,322 | $25.8 \%$ |
| Washington | 5,119 | $27.8 \%$ |

| Ophthalmology | $48 \%$ |
| Urology | $48 \%$ |
| Radiology | $47 \%$ |
| Gastroenterology | $45 \%$ |
| Neurological Surgery | $45 \%$ |
| Otolaryngology | $45 \%$ |
| Anesthesiology | $44 \%$ |
| Dermatology | $43 \%$ |
| Hematology/Oncology | $41 \%$ |
| Internal Medicine | $40 \%$ |
| Vascular Surgery | $40 \%$ |
| Family Practice | $38 \%$ |
| Obstetrics/Gynecology | $38 \%$ |
| Pediatrics | $38 \%$ |
| Emergency Medicine | $34 \%$ |
| Nephrology | $34 \%$ |

Source: Merritt Hawkins' Physician Staffing Slide Rule; 2013 American Medical Association (AMA) Master File)

Of these 23 major specialties, 13 are $45 \%$ or more comprised of physicians 55 years old and older. Internal medicine subspecialists and surgical specialists often treat the pathologies and conditions associated with aging, and it is these physicians who are aging out the fastest at the precise time when patient demographics are inexorably driving need for medical specialists higher.

## A Wave of Retirements

As these numbers show, a significant percent of physicians are at or near retirement age. According to The Physicians Foundation 2014 Survey of America's Physicians referenced above, $22.2 \%$ of physicians aged 56 or older indicate they will retire in the next $1-3$ years, while $9.4 \%$ of all physicians indicate they will retire in the next 1 to 3 years. In addition, many physicians indicate that due to changes in the healthcare system they will accelerate their retirement plans.

## Medicine and healthcare are changing

 in such a way that:|  | 46 or > |
| :---: | :---: |
| I will accelerate <br> my retirement <br> plans | $41.4 \%$ |
| I will defer my <br> retirement plans | $18.1 \%$ |
| I will not dange <br> my retirement <br> plans | $40.5 \%$ |

Even $33.7 \%$ of physicians 45 or younger in the survey indicated they plan to accelerate their retirement plans.

Physician retirement numbers are difficult to project because economic and medical practice conditions are subject to changes which may alter physician retirement patterns. However, the AAMC study referenced above projects that an upper end shortage of 90,400 physicians by 2025 will be more likely given an accelerated rate of physician retirement. Physician surveys conducted by Merritt Hawkins and others suggest an accelerated pace of physician retirements is to be expected.

## Physician Morale

Changing dynamics in the healthcare field, including the implementation of the Affordable Care Act (ACA), flat or declining reimbursement, rising costs, an increased level of regulatory compliance and the implementation of electronic medical records (EMR), have placed older physicians at a crossroads. While certain physicians welcome the new changes, others are not as optimistic about the state of the medical profession:

Which best describes your morale and your feelings about the current state of the medical profession?

|  | 46 or $>$ |
| ---: | :---: |
| Very positive | $7.9 \%$ |
| Somewhat <br> positive | $31.0 \%$ |
| Somewhat <br> negative | $38.6 \%$ |
| Very negative | $22.5 \%$ |

Which best describes how you feel about the future of the medical profession?

|  | 46 or $>$ |
| ---: | :---: |
| Very positive | $10.2 \%$ |
| Somewhat <br> positive | $35.6 \%$ |
| Somewhat <br> negative | $40.9 \%$ |
| Very negative | $13.4 \%$ |

As indicated above, over $60 \%$ of physicians 46 and older have negative feelings about the current state of the medical profession, while over $54 \%$ either feel somewhat negative or very negative about the future of the medical profession. This pessimistic outlook is driven by a variety of factors, two of which are referenced below (EMR implementation and the ACA):
how has EMR affected your practice?

|  | 46 or $>$ |
| ---: | :---: |
| Improved <br> quality of care | $26.0 \%$ |
| Detracted from <br> quality of care | $28.0 \%$ |
| Improved <br> efficiency | $20.2 \%$ |
| Detracted from <br> efficiency | $51.1 \%$ |
| Improved patient <br> interaction | $3.8 \%$ |
| Detracted <br> from patient <br> interaction | $49.4 \%$ |
| Has had little to <br> no impact on <br> the above | $7.7 \%$ |

Do you have significant concerns that EMR poses a risk to patient privacy?

|  | 46 or $>$ |
| ---: | :---: |
| Yes | $58.4 \%$ |
| No | $41.6 \%$ |

Source: The Physicians Foundation 2014 Survey of America's Physicians
Over $51 \%$ of physicians aged 46 or over feel that EMR has detracted from practice efficiency, while $49.4 \%$ feel that EMR has detracted from patient interaction. Over half of physicians 46 or older (58.4\%) also express concern that EMR poses a risk to patient privacy. Many older doctors also are dubious about the ACA:

## What overall grade would you give the Affordable

 Care Act as a vehicle for healthcare reform?|  | 46 or $>$ |
| :---: | :---: |
| A | $3.4 \%$ |
| B | $19.5 \%$ |
| C | $26.3 \%$ |
| D | $22.3 \%$ |
| F | $28.5 \%$ |

Source: The Physicians Foundation 2014 Survey of America's Physicians
Over $77 \%$ of physicians 46 or older give the ACA a grade of C or worse, including $28.5 \%$ that give the ACA a failing grade. Many older physicians entered medical practice in the "golden age" of fee-for-service medicine and feel that the game has changed on them beneath their feet.

It can be reasonably projected that tens of thousands of these physicians will retire in the near future. If, in fact, $9.4 \%$ of physicians retire within three years, as indicated in The Physicians Foundation survey, it
would result in a loss of approximately 76,000 physicians from the workforce. If $22 \%$ of physicians 60 and over retire in the next one to three years, it would result in the loss of over 49,000 physicians from the workforce. About 78,000 physicians will join the workforce in the next three years, barely offsetting the potential number who will leave. Because younger physicians tend to work fewer hours than older physicians and are more likely to take employed positions, one new physician entering practice is unlikely to equal one older physician leaving.

## Conclusion

As we move further into the 21st century, aging population demographics will become a key challenge facing the healthcare system. A growing older population, with more frequent physician visits, surgical rates and diagnostic testing per capita, will require a larger physician workforce to make access possible. This challenge will correspond with the challenge created by an aging physician workforce, many of whose members are primed for retirement.
